Fitted to cars exported mainly to the USA

A Note about this System

This particular system was an oddball one, as far as we can see hastily put together by Volvo in late 1967 to comply with US safety and local content regulations, which must have come i~~ play at some stage during that year. The system uses Girling disc brakes at the front, coupled with Wagner Lockheed drum brakes at the rear, and with the peculiarity of a Girling remots brake servo which operates on the front wheels only. The master cylinder is of the dual-circuit tandem type, made especially for Volvo by Wagner Lockheed. Repair kits for the originalS are available. We are now also able to offer a new complete (repro) cylinder (less the reservoir).
